KWARTILE IRONMAN

Kwartile Ironman handle the operations around the lifecycle of one Spark application. Its target is to simplify starting a new spark job, helping customers to select appropriate parameters from the UI, live monitor and analyse the application execution.

Using secure channels, Ironman connects to Spark cluster agents and instruct, monitor and check all spark application execution parameters. All collected data is send in real time to a backend cloud service, which store and analyse the data.

Based on the information collected, Ironmen recommend various numbers of optimization in the Spark application – changing runtime arguments, code improvements or parallelism.

- Backend Cloud Services
- Big Data, Messaging and Analitycs
- Web and Mobile Applications
- NoSQL data storage
- User Interface Design
- Project Management
- Quality Assurance
